Built for MSPs & Modern Organizations

Cloud Native Application Protection Platform

Cloud Security: Holistic Protection for Infrastructure, Identities, and Workloads

As cloud environments grow more complex, so do the threats. EDAO Cloud Security provides a unified Cloud Application Protection Platform — giving you full visibility across multi-cloud assets, automating threat detection and compliance, and guiding your team with clear, actionable insights.

Complete Visibility

Gain a 360° view of assets and exposures across all your clouds

Reduced Exposure

Find prioritized security gaps and remediate, immediately

Continuous Governance

Secure the complete lifecycle from development to deployment

Streamline Compliance

Minimize reporting time and effort with automated compliance reporting

Speed Remediation

Leverage powerful visualizations and step-by-step remediations

Scale Security Operations

Democratize insights and accelerate organizational security efforts

For more information, visit <https://edaogroup.io> or contact us at info@edaogroup.io

Key Capabilities

Multi-cloud Asset Management and Unified Visibility

Deep, centralized visibility into all identities, data, infrastructure and workloads across your cloud environments.

Cloud Security Posture Management

Simplify cloud compliance with a single solution that continuously scans configurations and resources across clouds, identifies violations, and automates remediation.

Cloud Workload Protection

Scan and detect critical risks identifying vulnerabilities, exposed secrets/sensitive data, malware and misconfigurations across virtual machines, containers and serverless functions.

Cloud Infrastructure Entitlement Management

Surface findings that are near-impossible to detect manually and enjoy precise, automated remediation.

For more information, visit <https://edaogroup.io> or contact us at info@edaogroup.io

Key Capabilities

Kubernetes Security Posture Management

Ensure Kubernetes clusters are secure by default or, should a misconfiguration be detected, proactively alert relevant stakeholders to quickly mitigate them.

Self-Service Just-in-time Access

Get speedy approval for as-needed access, minimizing the cloud attack surface and avoiding the risk of unrevoked long-standing privileges.

Infrastructure as Code Security

Uncover misconfigurations and other risks in IaC to harden cloud infrastructure environments as part of the CI/CD pipeline and prevent risky deployments.

Cloud Detection and Response

Apply continuous behavioral analysis and anomaly detection to quickly identify and investigate cloud threats.

Full Stack Risk Analysis & Prioritization

Leverage full stack analysis to surface risk — including toxic scenarios that can expose sensitive data — and deliver actionable insights.

Auto-Remediation

Speed up remediation of cloud infrastructure risks by executing automated response actions to fix problems.

EDAO protects your cloud from every angle — detecting threats in real time, remediating risks automatically, and ensuring your infrastructure stays secure, compliant, and resilient at every layer.
