EDAO

Cybersecurity Platform, Services & Solutions

Built for MSPs & Modern Organizations

Threat Protection Suite - EDAO Guard

A comprehensive, multi-layered defense platform that protects clients across every threat vector - from endpoints to email, identity, cloud, and beyond.

69%

of small businesses fail to get cyber insurance coverage

Common Cybersecurity Threats

Key risks organizations should watch for:

Phishing

Fraudulent emails trick employees into revealing credentials or downloading malware.

Ransomware

Encrypts vital data and demands ransom, causing disruption and financial loss.

Data Loss

Hardware failure, accidental deletion, or cyberattacks leading to business disruption.

User Risk

Human errors like weak passwords and clicking malicious links create major vulnerabilities.

EDAO Guard – All-in-One

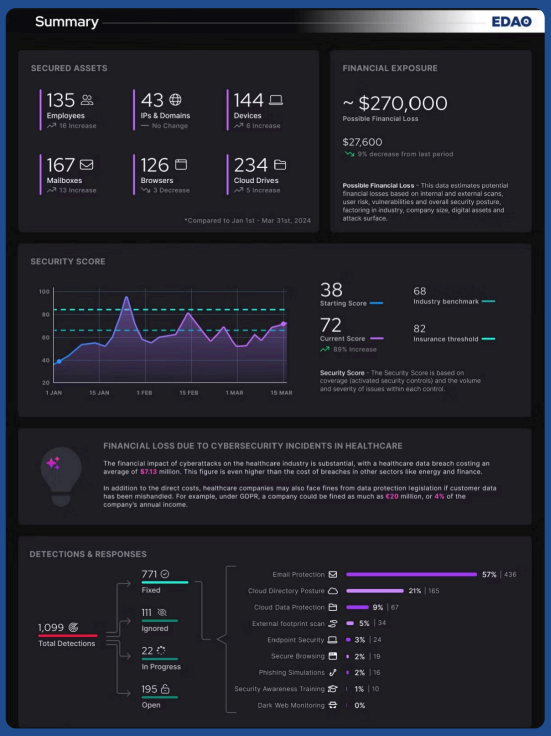
Take full control of your entire attack surface

- ITDR (Identity Threat Detection & Response)
- External Footprint
- Dark Web Monitoring
- Cloud Data Protection
- Email Protection (Checkpoint)
- Endpoint security (SentinelOne EDR + MDR 24/7)
- Security Awareness
- Phishing Simulation

Manage and track compliance requirements across different frameworks (SOC2, GDPR, HIPAA, and ISO 27001)

Pre-Bind

Post-Bind



Key Outputs

- Cyber Risk Score (with industry benchmarking)
- Estimated Financial Loss Exposure
- Security Control Coverage Status
- Risk Trends & Improvement Tracking

Why This Matters

- Improved pricing accuracy
- Reduced claim frequency and severity
- Lower loss ratios
- Fewer coverage disputes
- Faster underwriting cycles
- Stronger insured engagement
- Differentiated cyber insurance products

Stop Threats Before They Stop You

Businesses can now leverage a fully managed Threat Protection Suite built for their unique environment to defend email, cloud data, endpoints, identities, employees, external exposure, and dark web activity, helping prevent phishing, ransomware, account abuse, data loss, and more from the inside out.

Email Security

Continuously monitors organizational emails to detect threats such as malware, phishing, and spam, with automated actions to quarantine malicious messages and alert users.

Endpoint Security

Monitor device posture, manage policy settings and discover end-point threats in real-time to automate remediations and prevent issue escalation.

ITDR

ITDR (Identity Threat Detection & Response) monitors identity behavior across the cloud to detect unusual activity, correlate risk signals and trigger targeted responses.

External Footprint

Discover Domains, IPs, & exposed assets. The discovery domain is used to link associated domains and IPs to the asset list.

Dark Web Monitoring

Search for leaked credentials and confidential data in the dark web.

Cloud Data Protection

Safeguard cloud environments and enforce compliance across all data assets.

Phishing Simulation

Use simulated phishing campaigns, generated by a creative AI tool, to test employees and educate them on this common threat.

Awareness Training

Train employees on the latest cybersecurity best practices to create a first line of defense against attackers.
