// FOUR INTEGRATED CYBERSECURITY SERVICES — ONE MSP PLATFORM · MSP can offer Modular Services

Network Management

Real-time network monitoring with proactive alerts & automation, device health tracking, resource & device discovery, network metrics — backed by analytics, reporting, and statistics across every managed environment.

Asset & Patch Management

Eliminate unpatched vulnerabilities — the #1 ransomware entry point. Full asset visibility, automated patching, and compliance enforcement across every client device.

Threat Protection Suite

Full-stack threat protection suite covering EDR/MDR 24x7, email security, identity threat detection, external footprint monitoring, cloud data protection, dark web, security awareness & phishing simulations, and compliance coverage. Prospecting reports that open new doors.

Vulnerability & Exposure Management

Identify, prioritise, and remediate exposures before attackers exploit them. Continuous risk scoring and board-ready reporting that turns security into a revenue conversation.

// KEY BENEFITS FOR MSPS & IT SERVICE PROVIDERS

Unified Control Hub

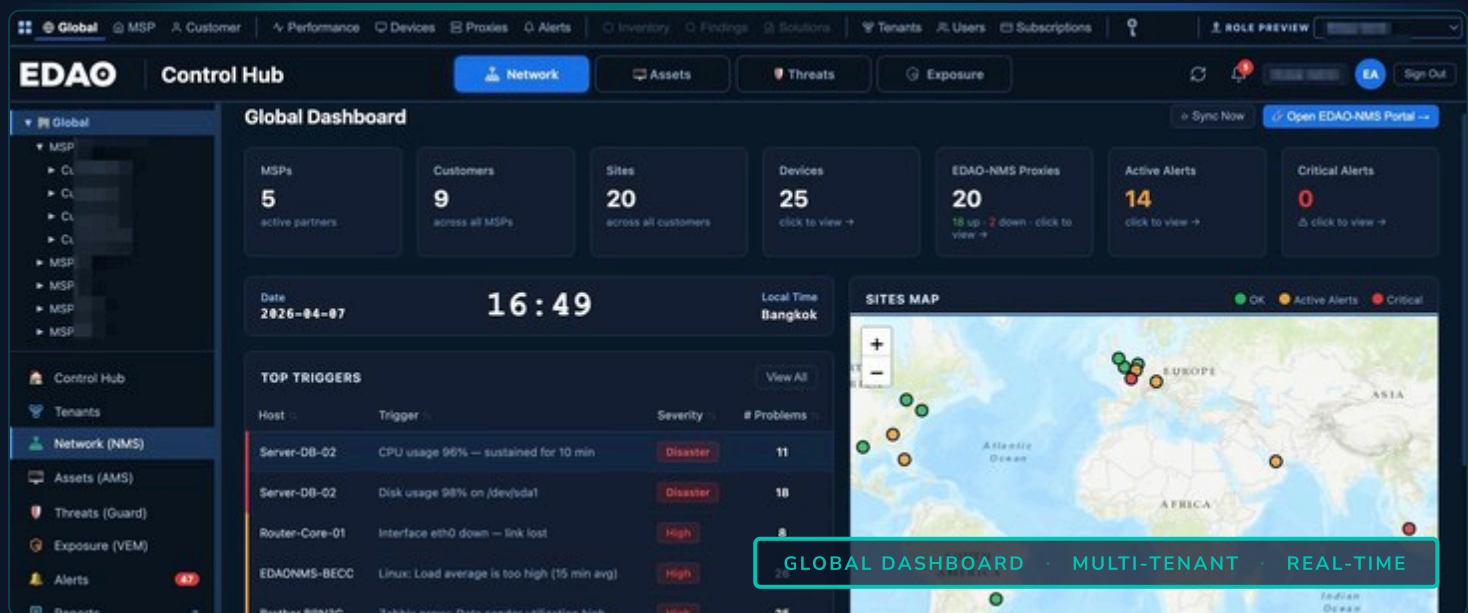

One platform for all your cybersecurity services — Network Management, Asset & Patch Management, Threat Protection, and Vulnerability & Exposure Management. One login, one dashboard, zero tool sprawl across the customer base.

Turn Risk into Revenue

100 cyber risk prospecting reports expose vulnerable SMBs in your territory — giving you the intelligence to open doors, start conversations, and close deals. 14-day trials let prospects see real threats before they commit.

Scale Cyber Coverage, Not Costs

Automated threat detection, alerting, and security reporting let your team protect more customers per analyst. Grow margins as your portfolio expands — without growing headcount to match.
